OTOPLASTY
EXPERT EAR CORRECTIONS THAT WILL CHANGE YOUR LIFE WITH NO INCISIONS
Do you often look in the mirror and wonder how you can hide your protruding ears or “bat ears”?

Having obtrusive or large ears is not as uncommon as you may think, and unfortunately, it can be very distressing and frustrating especially for children and teenagers who are bullied and as a result lack self-esteem.

Occasionally the upper area of the ear, also known as the bowl can slightly protrude, or natural folds that help shape our ears can sometimes fail to develop, and this can occur in one ear, but it’s more common in both.

Otoplasty - correcting prominent ears

Do you often look in the mirror and wonder how you can hide your protruding ears or “bat ears”?

Having obtrusive or large ears is not as uncommon as you may think, and unfortunately, it can be very distressing and frustrating especially for children and teenagers who are bullied and as a result lack self-esteem.

Occasionally the upper area of the ear, also known as the bowl can slightly protrude, or natural folds that help shape our ears can sometimes fail to develop, and this can occur in one ear, but it’s more common in both.

who should get Otoplasty?

People who suffer from:

- Irregular shaped ears
- One ear that protrudes out more than the other
- Ears that stick out “Bat Ears”
- Ears that are missing folds
- Earlobes that are more prominent than the rest of your ear
- Enlarged earlobes
Otoplasty is also known as “ear pinning” and is a surgical procedure to perfect prominent ears. However, Dr. Zurek has developed a nonsurgical alternative to Otoplasty which takes only a couple hours. His method is comparatively pain-free and requires no bandages which is entirely different than any other doctor that specialises in correcting prominent ears. In fact, 99% of surgeons do Otoplasty the painful, and expensive way that requires an extended recovery period. This is why Dr Zurek’s method is superior to the conventional surgery which is overpriced, painful, and scary especially for younger patients.

an added bonus:

Dr Zurek’s technique is cheaper than any other corrective ear procedures while delivering the same results and requires no general anaesthesia.

your consultation with Dr. Zurek

First, you’ll go into one of Dr. Zurek’s very private consultation rooms to discuss the procedure, and what results you can expect. Dr. Zurek will examine you and let you know how he can help. He’ll show you some “before and after” photos so you can see first-hand how he has helped so many people with similar problems.
what is Otoplasty?

Otoplasty refers to a corrective surgery to perfect ears that “stick out” by setting the ears closer to the head and reshaping the ear folds in a natural manner.

Most often, people with prominent ears or “bat ears” have a couple of particular features. One feature is that the edge of the ear is not shaped correctly and another feature is an enlarged angle. Both of these problems can be corrected with Otoplasty.

Most patients that need their ears corrected have lived with this condition since they were children. That’s why having Otoplasty at an early age once the ears have developed can help dodge years of teasing and when adulthood enters you can feel liberated to have your hair up, which is normally avoided in adults that go through most of their life with protruded ears.

Surgery can be terrifying to a child, and that’s why Dr. Zurek’s technique is a much more superior method than any other in the field. His nonsurgical alternative approach to Otoplasty only takes less than a couple hours, and it’s relatively pain-free and requires no bandages which completely different than any other corrective ear specialist out there. Dr. Zurek’s technique is reasonably priced and requires little time to heal, leaving you with a short recovery time.
frequently asked questions:

will an Otoplasty fix my problem?

Otoplasty will place ears in position, so they become balanced with your entire face. Generally, people choose Dr. Zurek’s non-surgery corrective ear technique when they think their ears stick out in a serious manner and they can be corrected quickly, with almost no pain or symptoms.

benefits of this technique include:

- Boosted self-esteem
- Increase in confidence
- Extremely secure procedure with no risk

what you can expect:

Your first step should be a consultation with Dr. Zurek when you’re considering corrective ear surgery and the consultation will take roughly 40 minutes. You can freely talk about your expectations and the goals you want to achieve.

While in the consultation, Dr. Zurek will have different questions about your health and what physical results you want from the procedure. Prepare yourself to discuss any allergies, current medications, and previous surgeries.

Dr. Zurek will thoroughly examine your ears and how they correspond to your entire face. Dr. Zurek will carefully look at any problems in regards to the size, shape, and differences your ears have to establish a surgery plan.

what’s involved with Otoplasty?

An Otoplasty is done by a plastic surgeon who will treat protruding ears by giving you a natural looking and permanent treatment. The procedure normally takes place in a hospital and often requires general anaesthetic. This is just one of the many reasons why Dr. Zurek’s technique is preferred to the standard Otoplasty because he uses absolutely NO general anaesthetic!

In many cases, it requires a tiny cut behind the ear where the cartilage is examined and altered. With Dr. Zurek’s technique, zero cutting is needed because of the special sutures he uses which are woven into the ear under the skin with tiny punctures. The sutures are permanent and will not be visible after a very short recovery time. Dr. Zurek is very careful at making a smooth fold on the ear, instead of a sharp ridge that flattens it to the side of the head.
what can I expect during recovery?

Developments in anaesthesia have meant that patients can now be more comfortable, but risk and discomfort after surgery still exists. With Dr. Zurek’s method, you don’t have to worry about waking up after the procedure feeling groggy because there is no anaesthesia and no need for it because of his state-of-the-art non-surgical technique. You won’t have to suffer from post-surgery bruising and swelling with weeks of recovery. You can simply go home and relax and get back to your routine in just a couple of days.

do I have to worry about scars?

Unlike conventional Otoplasty procedures that leave scars due to large incisions, with Dr. Zurek’s method you won’t have any visible scars.
when will I see results?

In Otoplasty, normally the surgeon will place a bandage around your head, once it's taken off you will normally see results around six weeks as soon as the bruising and swelling have passed. With Dr. Zurek’s non-surgical technique you will see results immediately.

complications with ear surgery?

There is always some risk when getting surgery and with Otoplasty they are as follows:

- Fluid in the ears
- Loss of balance
- Nausea
- Sensitivity around the surgical area

Corrective ear surgery complications are easy to avoid by choosing Dr. Zurek’s technique, and the results are the same at a fraction of the cost.

am I ready?

Emotional strength is a major factor that should be addressed before any medical procedure. A positive result is determined by your expectations and attitude. One of the easiest ways to find out what you can expect from Otoplasty is to look through some before and after photos while you’re at the consultation with Dr. Zurek.
